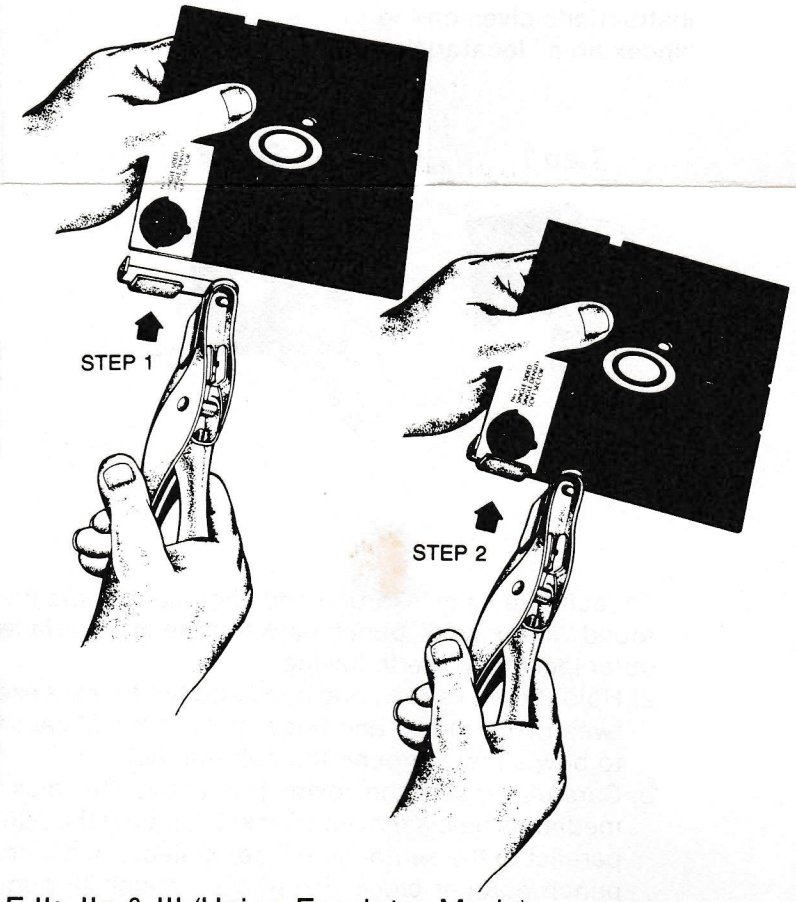
***Doubles 5¼" Single Sided Diskette storage capacity**

NIBBLE NOTCH Computer Products is the manufacturer and distributor of high quality hardware and software designed to maximize media storage capacity. Through the use of **NIBBLE NOTCH** Computer Products owners of single "read/write" head disk drives can • Cut diskette cost by 50% • Double storage capacity • Reduce large volume files • Create more compact, easier to manage files • Use tracks normally occupied by DOS • Reduce the file directory size • Add an extra 36th track with most disk drives • Verify the disk and remove bad sectors, allowing use of both sides with increased confidence • Perform disk drive speed check • Our products pay for themselves quickly when just a few diskettes are converted.

NIBBLE NOTCH I "write enable notch" (square punch) is needed for users of APPLE, COMMODORE, FRANKLIN, ATARI and most other "soft sectored" systems. Consult your operators manual to determine your system requirements.

NIBBLE NOTCH I (NNI) Instructions

1. Pick-up the diskette and hold it with the manufacturers pre-cut notch away from you and the backside of the diskette facing down. (see drawing)
2. Hold **NIBBLE NOTCH** firmly and insert the diskette between the punch jaws. Slide diskette in until it touches the rear tab of the guage then slide sideways against the side tab. (see drawing)
3. When the diskette edges are flush with the guage, squeeze down firmly on the punch. Now you have a double sided diskette. (see drawing)



*The added ***"write enable notch"*** will allow most disk drives to use the backside of a single sided diskette. Other systems, in addition to the ***"write enable notch,"*** need an added ***"sector timing pulse hole"*** (small ¼ inch hole adjacent to the large hub-ring hole).

If you are unsure whether your system needs the ***"sector timing pulse hole,"*** consult your disk drive operating manual.

WARRANTY

NIBBLE NOTCH warrants that each punch is free from defects in materials and workmanship for a period of 90 days from date of purchase. **NIBBLE NOTCH** will repair or replace any punch under the terms of this warranty provided the defective punch is returned prepaid. **NIBBLE NOTCH** will not be liable for any damages beyond the original replacement value of the punch.

DISK OPTIMIZER© SYSTEM, FOR THE APPLE II+, IIe & III (Using Emulator Mode)

Increases Disk Storage Capacity by using tracks normally occupied by DOS • Reduces file directory size • Adds extra 36th track using most disk drives • Verifies the disk and removes bad sectors, allowing use of both sides with increased confidence • Performs disk drive speed check • Pays for itself when used on just a few diskettes by increasing their storage capacities • Disks are copyable with Apple's Copy or CopyA program.

NNII instructions are on the reverse.
